The U.S. lift Truck division situated in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's original home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a national equipment expansion venture. Early sales of this manufacturing equipment focused on large business communities, the armed services and on state-run companies. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Domestic forklift business for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's sophisticated technological improvements combined with sales success placed them in a position of significant growth of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to counter act competitive pressures in the US materials handling industry. This venture greatly expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a new plant which helped establish the business for the fabrication of high end added-value goods suitable for export. In 1993, the company had a international sales system and started exporting designs they had established through in-house technology, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas marketplaces.
